The patents, publications, or other information submitted for consideration by the Office are listed on the PTO-1449(s), attached hereto.

II. COPIES (check at least one box)

- a. ☒ Submitted herewith is a legible copy of (i) each U.S. and foreign patent; (ii) each publication or that portion which caused it to be listed; and (iii) all other information or that portion which caused it to be listed.
- b. ☐ Some or all of the documents listed on the PTO-1449 are not enclosed because they were cited in the International Search Report and copies should already be in the PTO file. If copies are needed, please contact the undersigned.

III. CONCISE EXPLANATION OF THE RELEVANCE  
(check at least one box)

a. ☐ **DOCUMENTS IN THE ENGLISH LANGUAGE**

The attached patents, publications, or other information in the English language do not require a statement of relevancy.

b. ☒ **DOCUMENTS NOT IN THE ENGLISH LANGUAGE**

A concise explanation of the relevance of all patents, publications, or other information listed that is not in the English language is as follows:

Two of the enclosed documents are PhD theses in German language. The thesis of Landschutze with the title "Analyses concerning the influence of the acetyl-CoA synthesis and use in transgenic plants" concerns the modification of metabolic pathways in plant cells which use acetyl-CoA as a substrate. Using recombinant DNA technology the activity of mitochondrial citrate synthase was inhibited in potato plants. Furthermore, genes of the PHB synthesis pathway of *Alcaligenes eutrophus* H16 were expressed in potato and tobacco plants.

The thesis of Kuhn with the title "Characterization and localization of the sucrose transporter SUT1 in Solanacea" describes the immunological localization of the sucrose transporter SUT1 in potato, tomato and tobacco. Furthermore, this document describes the inhibition of the SUT1 in transgenic potato plants by an antisense approach specifically in phloem cells using the rolC promoter. Also the phenotypic changes in such antisense plants are described. The plants were shown to have an increased content of sucrose, of starch and of hexose when compared to wild-type plants and cultivated under high intensities of light. However, when cultivated under low intensities of light these antisense plants show no changes with respect to the content of sugars when compared wild-type plants. Furthermore, transgenic tomato plants were produced in which the sucrose transporter SUT1 was specifically inhibited in phloem cells using an antisense approach. The transgenic plants showed phenotypic changes in leave morphology and accumulation of starch in

source leave tissue after elongated periods of cultivation in the dark.

c. ☐ **ENGLISH LANGUAGE SEARCH REPORT**

An English language version of the search report or action that indicates the degree of relevance found by the foreign office is attached, thereby satisfying the requirement for a concise explanation. See MPEP 609(A)(3).

d. ☐ **OTHER**
